

Osland Piping Supply

Grooved Fabrication & Carts

The primary goals for Grooved Fabrication are:

- Minimize loose pieces - Fabricate in a controlled Fab Shop environment with significantly higher productivity compared to the field.
- Air Tested prior to delivery if requested.
- Control & Minimize material handling costs at the jobsite
- Less scrap at jobsite - easier to recycle / repurpose at the Fab Shop.
- Delivered in specialized carts to minimize labor & material handling costs.

Pre-planning is essential for fabrication to be effective. It is important to identify what areas or systems should be pre-fabricated and how the fabrication should be presented to the jobsite.
