## WELDED CHANNEL

## H-132-A

## 31/4" X 1 5/8"

## 12 Gauge Back-to-Back wt./100 ft. - 388\#

Supr-Green Powder Coated Finish

\# Bearing Load may limit load

* Load limited by spot weld shear
** Not recommended - KL/r exceeds 200
NOTES

1. The beam capacities shown above include the weight of the strut beam. The beam weight must be subtracted from these capacities to arrive at the net beam capacity.
2. Refer to page 50 for reduction factors for unbraced lengths
3. Allowable beam loads are based on a uniformly loaded, simply supported beam. For capacities of a beam loaded at midspan at a single point, multiply the beam capacity by $50 \%$ and deflection by $80 \%$.
4. The above chart shows beam capacities for strut without holes. For strut with holes, multiply by the following:

| OS by $88 \%$, | OS3 by $90 \%$, |
| :--- | :--- |
| RS $9 / 16$ by $88 \%$, | RS3 by $88 \%$ |
| RS-MOD $3 / 4$ by $85 \%$, | KO by $82 \%$. |

RS
RS-MOD $3 / 4$ by $85 \%$,

RS3 by 88\% KO by $82 \%$.
