CNC Plasma Cutting Table

This CNC style Plasma Cutting table can handle steel plates up to 5' wide and 10' long with a maximum plate thickness of 1". It is capable of cutting mild steel, stainless steel and most alloys.

If you can draw it, this machine can cut it. Information is inputted into a CAD format and the program will automatically layout and minimize scrap based on the job requirements. Multiple jobs can be run at the same time.

This machine is ideal for cutting base plates for equipment & stands as well as any unusual or irregular shape. This technology is used extensively in sheet metal duct fabrication, but it also has many other applications for the mechanical contractor.
